EXPERIENCE

Joyful Reading Co.

Designer & Developer, 2018 – Present

During my time at Joyful, I designed and developed the website during its redesign in 2022, designed the admin and user-facing experience for the Beanstack product, and developed reusable components for Beanstack. I pioneered how the current product looks, and built the style for the marketing materials and reading challenge banners.

Forever, Inc.

Developer, July 2017 – January 2018

I quickly learned Vue.js to assist the engineering team in building a responsive web app for creating photo books, including finalizing design details in the browser. I created functional wireframes in the browser as part of the primary navigation redesign to help with usability testing.

Bearded

Developer, January – June 2017

For six months before the company shut down. I worked at Bearded as a front-end web developer. I built and launched a standardized, boilerplate pattern library for use on future projects and helped develop the front-end for West Virginia Wesleyan College's redesign. As my first time at an agency, this job gave me experience collaborating with the team on the design and development workflow.

Self-Employed

Freelance Designer & Developer, 2014 – 2016

Projects I worked on doing freelance design work have ranged from simple CSS and HTML edits to large-scale Wordpress redesigns. I became more adept at front-end web design and development, business and system administration, and interpersonal and client relations.
